

Customer Journey Map

Smart Lender | Team Lead: Venkat Rajarapu | Contributor: Kollipara TejaHansika

Stage	Action	Touchpoint	Emotion
Awareness	Hears about Smart Lender / visits the site	Web app landing page	Curious
Input	Fills in income, credit history, loan amount, etc.	Application form	Slightly anxious
Processing	Submits form, system runs prediction	Flask backend + ML model	Waiting
Result	Sees Approved / Rejected prediction	Result page	Relief or disappointment
Next Step	Proceeds to formal bank application or revises details	External bank process	Decisive

Journey: Applicant Checking Loan Eligibility

Key Insights

- The 'Processing' stage must be fast (under a few seconds) to avoid drop-off.
- The 'Result' stage should be clear and not overly technical for a non-technical user.
- Trust is built when the form fields map clearly to real-world loan criteria the user understands.

Opportunities for Improvement

- Add a confidence score alongside the prediction to build trust.
- Provide a short explanation of which factors most influenced the result (future scope).
